

Market, Sectors and Products

Quality Chemicals is passionate about customer service and seeks to achieve the highest quality in its product range at competitive costs.

The market's evolution has brought new challenges in competitiveness which has made us redirect the focus of our relationship with our customers. Documentary and regulatory requirements are increasingly more specific and particular to each sector. While meeting similar needs in terms of documents and specificity, requirements in the pharmaceutical industry, for instance, differ from those in the food sector.

This specificity means we set about products, documentation and our commercial approach by dividing the market into activity sectors. And this is now our unique profile; we sell formulated products specifically tailored and documented for each industry.

Our experience in a range of industries enables us to supply the most appropriate product for each sector.

We mostly target the following sectors:

- Laboratory reagents
- Feed
- Food
 - *Nutraceuticals*
 - *Dietary supplements*
 - *Dairy industry*
 - *Brewery industry*
 - *Meat industry*
- Veterinary
- Pharma industry
 - *Products according to pharmacopoeia*
 - *GMP manufactured*
 - *GMP conditioned*
 - *Oral care*
 - *Contact Lens care*
- Cosmetics
- Chemistry
 - *Electronics*
- Clinical chemistry

Inorganic salts, reagents for synthesis and high purity solvents are the core of our product range.
