

Pharma industry

Chemicals are crucial in drug manufacturing and inorganic salts can be used as an excipient or active ingredient.

In both cases the product quality, manufacturing process guarantees, traceability and documentation required by the regulatory system are critical.

We can be a valuable partner supplying the products required under pharmacopoeia monographs, guaranteeing manufacturing processes and traceability. We are specialists in delivering the required quality and documenting it accurately, rigorously and appropriately.

Quality Chemicals can manufacture this industry's products in line with GMP standards along with associated documents (DMF).

In pharmacy we largely target the following sectors:

- Products according to pharmacopoeia
- GMP manufactured
- GMP conditioned
- Oral care
- Contact Lens care
