

Cosmetics

Quality parameters and manufacturing processes have to be guaranteed to meet cosmetics industry requirements.

Inorganic salts and product blends are gaining relevance in the cosmetics industry as a sector that is taxing in terms of quality, traceability and compliance with increasingly tough regulations. Monitoring in areas such as safety, reliability and prevention against allergic reactions means manufacturers have to deal with an increasingly regulated industry (cosmetic regulations) as well as the advent of GMP guidelines.

We can be the partner you need in developing these products. We have the ability and resources to adapt and formulate products in line with customer requirements and if need be we can work with you on the most demanding supporting documents required by regulations.
