

When we can be helpful

- When you need a chemical whose grade is governed by any internationally-recognised standard (ACS, pharmacopoeias, etc.).
- When you want a “custom” product either because it has to meet your own specifications or because you need to develop it with us for a specific use.
- When you need product packaging of a type, quality or kind that is not common on the market.
- When you need a product for distribution under your own brand name (“private label”).
- When in doubt about safety or hygiene in handling your chemicals or the environmental impact of disposing of them. These are areas in which we are particularly proficient.
